STOWE HOLDINGS

SOLUTION OVERVIEW · 2026

NETPOS · NETACC · HOS

One suite, from the till to head office.

NetPOS, NetACC and the NetPOS Global Head Office System are Stowe's own fuel and retail software: built to streamline your business, tighten control and drive profitability, at one site or across a whole network.

TRUSTED BY

ABOUT STOWE

Southern Africa's fuel, retail & technology partner.

Fuelled by passion. Driven by innovation. One team that installs, connects, writes and supports the systems behind your sites.

Stowe has offices in all major regions of South Africa and satellite offices across Southern Africa, and works with a wide range of vendors. We support our own NetPOS solution at Level 1, 2 and 3, across more than 3,000 installed systems.

We offer project management, hardware and software installation, networking, EFT and the hardware integrations needed for fleet and fuel management. Support is by phone, through our call-logging portal, remotely and on site, and our eLearning platform makes sure your people are fully trained on the systems.

The NetPOS suite suits single sites, multi-site groups and corporate networks, for retail, fuel, or both in one. NetPOS runs on its own for a retail or fuel business, is enhanced by the full NetACC back-office tool, and is rounded off by the web-based Global HOS for owners who manage and control their business off site.

- Level 1, 2 & 3 support
- 3,000+ systems installed
- Remote & on-site
- eLearning platform

OUR FOOTPRINT

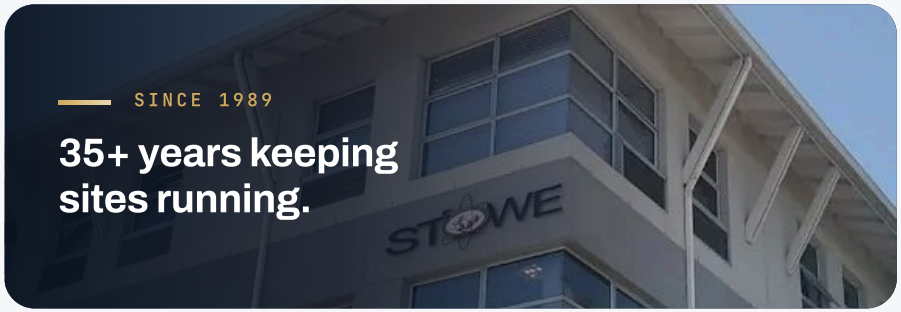
Head office in Cape Town, engineers across the region.

- South Africa · Head office
- Botswana
- Eswatini
- Lesotho
- Mozambique
- Namibia
- Zambia

POINT OF SALE
NetPOS
Runs the forecourt and the shop counter from one screen: pumps, tills and payments.

BACK OFFICE
NetACC
Shares NetPOS's database, so stock, accounts and cash-ups are always current.

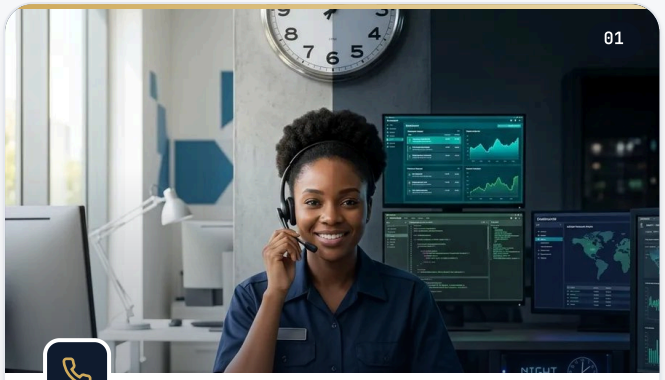
HEAD OFFICE
Global HOS
Web-based control of every site: price books, promotions, reports and live monitoring.



OUR SERVICES

Six strategic pillars. One unified solution.

From forecourt to head office, we connect every system, every site and every customer.



Managed Support Services

- 24/7 service desk
- Remote support
- Field engineering
- Escalation management

Site Systems & Integration

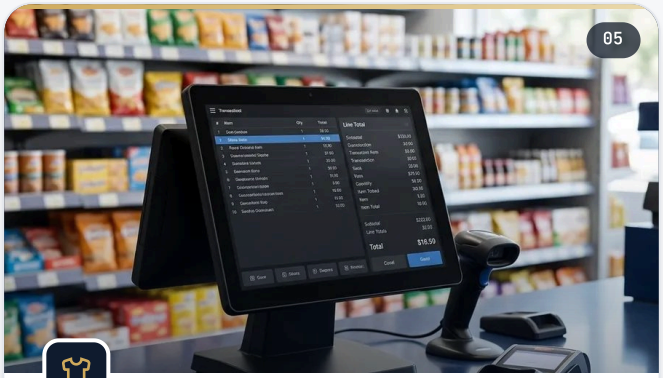
- POS, BOS, HOS, ATG
- Forecourt controllers
- DOMS, MPI, loyalty
- Payment integrations

Projects & Rollouts

- New site implementations
- Hardware refreshes
- Upgrades & pilots
- QA testing

Training & eLearning

- TalentLMS integration
- Custom video courses
- Assessments
- Certification

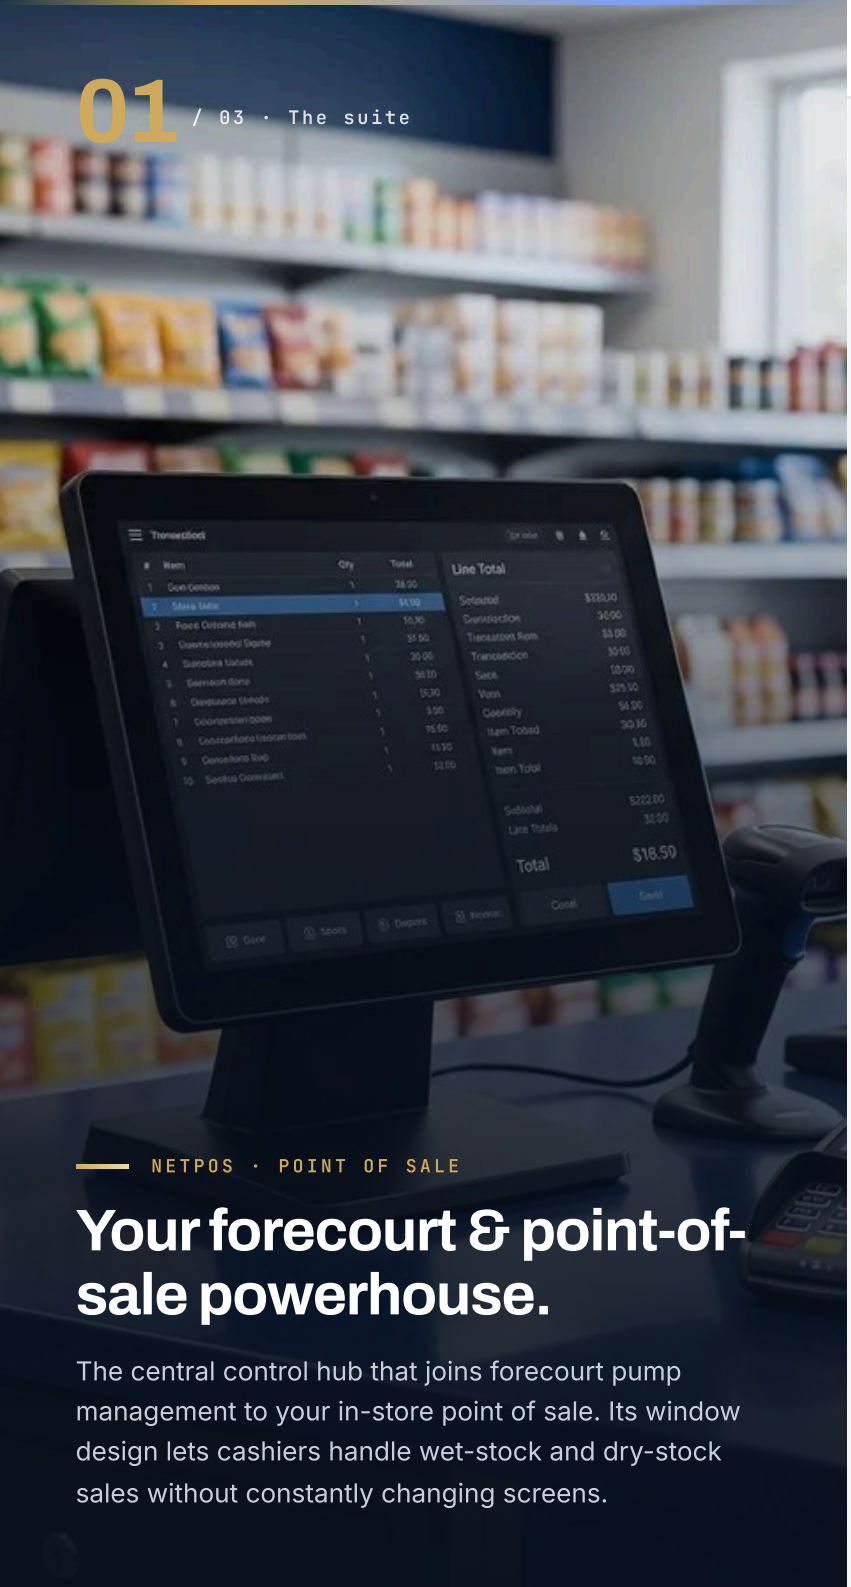


Asset & Supply Chain

- Procurement
- Warranty management
- Asset tracking
- Logistics & inventory

Software Development

- API development
- Custom integrations
- Reporting automation
- Bespoke solutions



NETPOS · POINT OF SALE

Your forecourt & point-of-sale powerhouse.

The central control hub that joins forecourt pump management to your in-store point of sale. Its window design lets cashiers handle wet-stock and dry-stock sales without constantly changing screens.

Key functionality

TOUCHSCREEN OR COST-EFFECTIVE PC

Intuitive pump control

Start, stop and pay pumps straight from the main screen, with real-time status updates and a choice of attendant tagging systems.

Versatile payment options

FleetMove post-pay, vouchers and online hot-card checks for fleet control, with Figment, SBSA and Payment24 integration.

Flexible split payments

Customers split one payment across card, cash and vouchers, right at the outdoor payment terminal (OPT), with no trip to the counter.

Transaction management

Every sale, wet or dry stock, is paid off on the POS. Track oils issued to attendants; repay, suspend and recall sales.

NetPOS flexibility

Home-based · Fuel · Retail · Fuel & retail · PC or touchscreen · Wide integration

Integrates with

Pump types, forecourt controllers, ATG, OTI and fleet solutions, including MiniPOS, Figment, Payment24, EFT terminals and payment solutions. Shares one database with NetACC and connects to the Global HOS.

Highlights

FINANCE · STOCK · REPORTING

Debtors and creditors

Detailed records for both, including sub-accounts for large fleet customers. Customise discounts, email debtor statements straight from the system, and issue fuelling tags or swipe cards.

Streamlined dry-stock operations

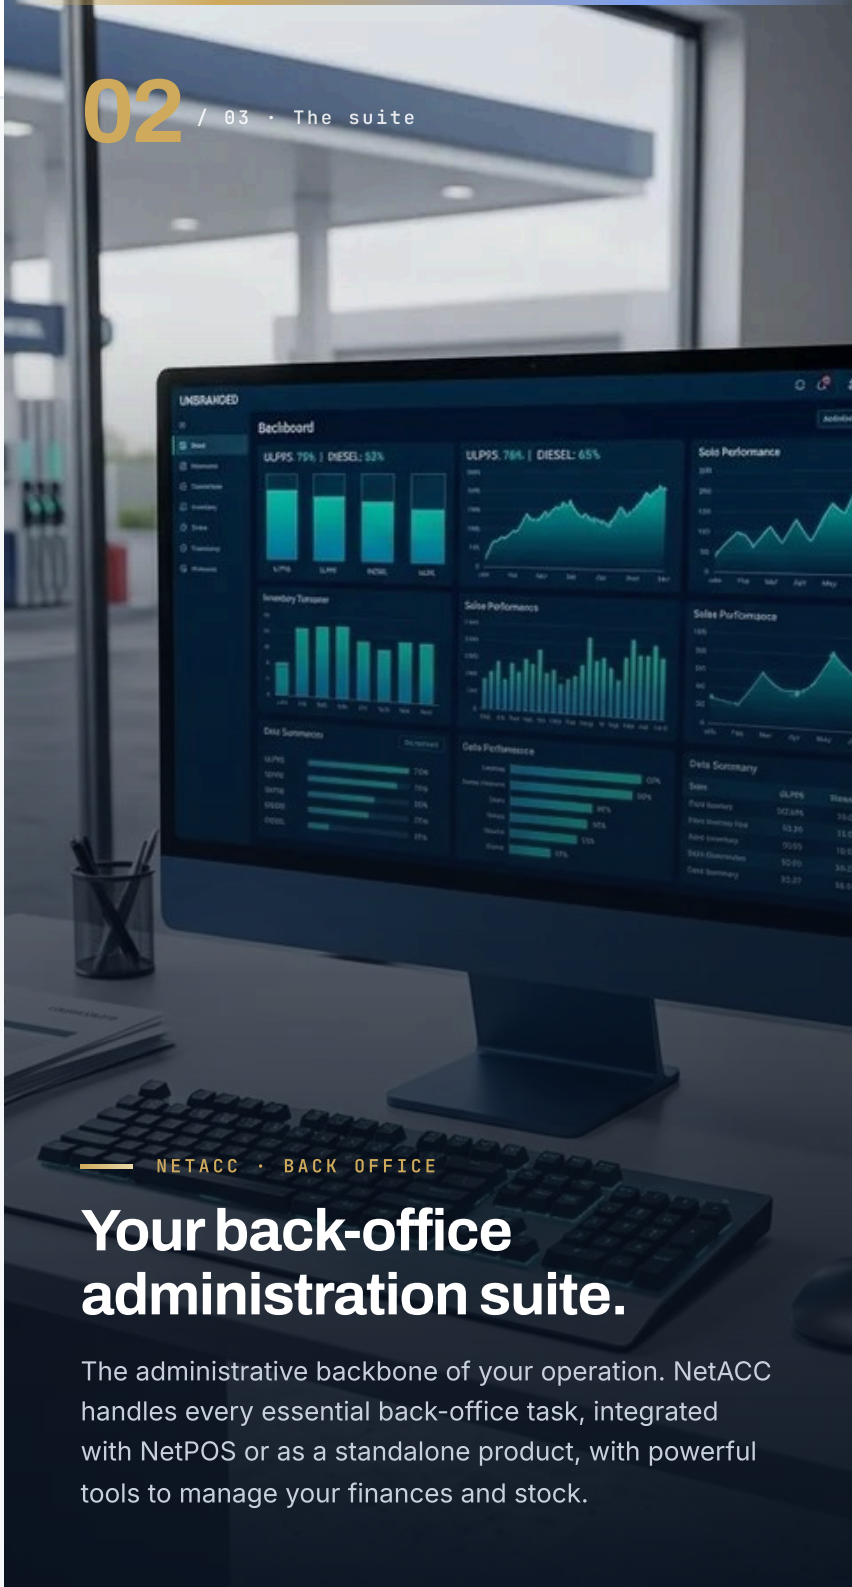
Add items, manage departments and locations, track stock levels, and create specials and recipes. Warehouse storage keeps shop and stored items apart for tighter stock control.

Efficient reporting

A wide range of reports, from sales and stock lists to detailed financial summaries, for deep insight into how the business is performing. Deviation reports trace every change made in NetACC, for full accountability.

Day to day in NetACC

- Receive stock and control stock levels
- Recipes for on-demand and prepared items
- Combos and promotions with set dates
- Price changes, labels, data to scales
- Local account customers and deposits
- Automatic cost and GP% calculations
- Cash-ups and payment reconciliations
- Financial control and reporting



02 / 03 · The suite

NETACC · BACK OFFICE

Your back-office administration suite.

The administrative backbone of your operation. NetACC handles every essential back-office task, integrated with NetPOS or as a standalone product, with powerful tools to manage your finances and stock.

03 / 03 · The suite

NETPOS GLOBAL HOS · HEAD OFFICE

Centralised command for every site.

For businesses with many sites, or sites across several regions: a web-based way to manage and control data from one place. Reach it from anywhere in the world. We call it a working holiday.

What HOS gives you

WEB-BASED · REAL TIME

Centralised management

Stock items, price books, new and redundant items, categories, departments, pricing exceptions, recipes, promotions, combos and account customers, all from one place.

Regional allocation & distribution

Send stock items, recipes, promotions, combos and fuel price changes to chosen regions or groups of sites in batches, reaching stores within minutes.

Real-time monitoring

Watch site connectivity and transaction uploads from one screen, so every location stays up to date and running smoothly, and problems are spotted before they cost a sale.

Reporting

Data flows up from every site in real time. Review and download fuel, dry-stock and goods-received reports and all transaction data, then drill down to any single site.

One price book, every store

NetPOS and NetACC can be locked so head office manages every item, promotion, combo, recipe and price, keeping categories and departments standard across all stores. Update many sites at once, and schedule fuel price changes for a set date and time.

ADVANCED FEATURES

Built for how fuel and retail really run.

Specialised functions that set your business apart, keeping it efficient, secure and adaptable.

FUEL · DOMS

DOMS integration

NetPOS is fully integrated with DOMS, making it a fit for all pump types, including MPI, and a range of attendant tagging solutions.

FUEL · HOS

Automated fuel price changes

Set new fuel prices remotely through HOS, with a date and time for each site to switch over, for compliant, on-time updates.

FUEL · FUELMASTER

Online hot-card authorisation

FuelMaster sites check authorisation online against a central hot-card file at the switch, not files held on site.

FUEL · OTI

OTI VIS integration

Secure, automated refuelling with OTI PetroSmart vehicle IDs. The VIS controller applies tag rules and works with the forecourt controller.

STOCK · DISCOUNTS

Dynamic dry-stock management

Discounts as a fixed rand value or a percentage on diesel and dry stock, for account customers or with secure authorisation.

STOCK · RECIPES

Recipe module

Prepared and on-demand recipes, with precise ingredient tracking and automatic stock adjustments on sale or preparation.

STOCK · SCALES

Scale integration

Weighted and non-weighted items, including complex recipes, with barcode support and data export for accurate pricing.

SALES · PROMOTIONS

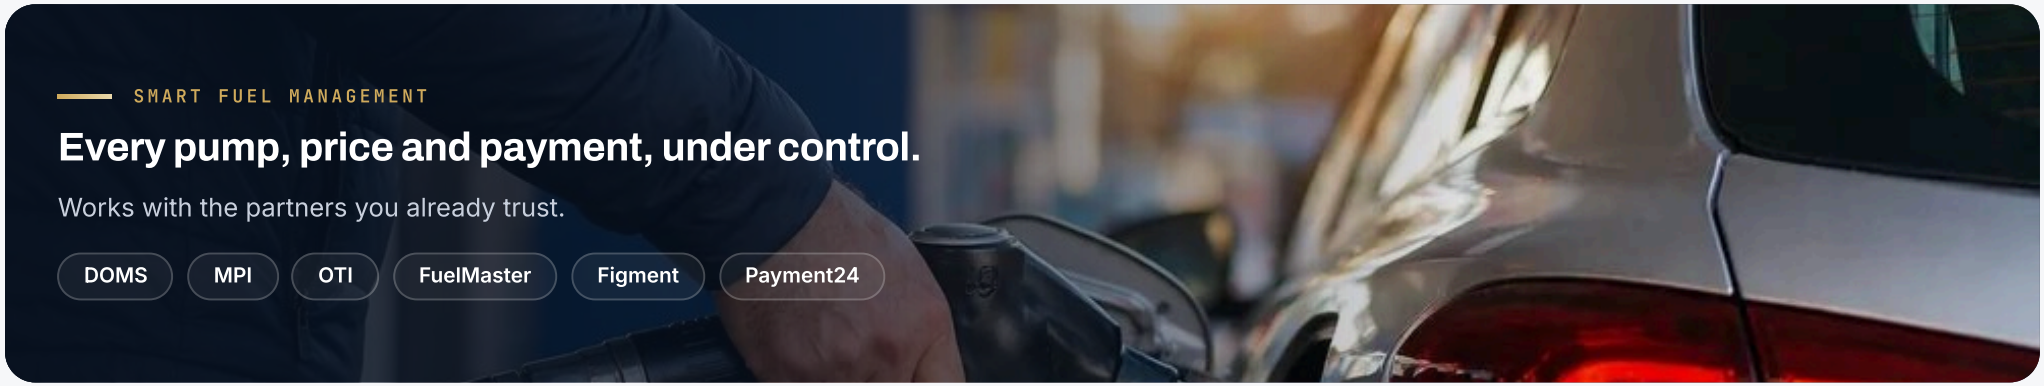
Combos & promotions

Combos sell two or more items at a set price; promotions discount multi-item purchases. Both are set up in BOS or HOS.

SALES · ATTENDANTS

Issue oil function

Cashiers issue oils to attendants, tracked by Figment and shown on the OPT to add to the fuel sale, for better oil stock control.



SMART FUEL MANAGEMENT

Every pump, price and payment, under control.

Works with the partners you already trust.

DOMS · MPI · OTI · FuelMaster · Figment · Payment24

ACCOUNTS, PAYMENTS & INSIGHT

Every rand accounted for, every report to hand.

Fleet accounts, card payments and statements, with the reports to prove every number.

ACCOUNTS

Local account management

Individual local accounts with unlimited sub-accounts for vehicle fleets, card rules such as fuel type or odometer, and deposits.

PAYMENTS

Integrated payment terminals

IPTs handle POS-driven retail sales; OPTs process fuel sales started by the attendant's tag, for quick, secure card payments.

STATEMENTS

Statement management

Email local account statements straight from NetACC after month end, with a history of previous statements always kept.

SUPPORT

Clear error handling

A full list of OPT response codes for FleetMove and vouchers helps attendants understand and resolve failed transactions.

HOS REPORTS

Reporting suite

Sales Summary, Pump and Detail, Stock Movement, Stock Received Summary and Site reports, as standard from head office.

NETACC REPORTS

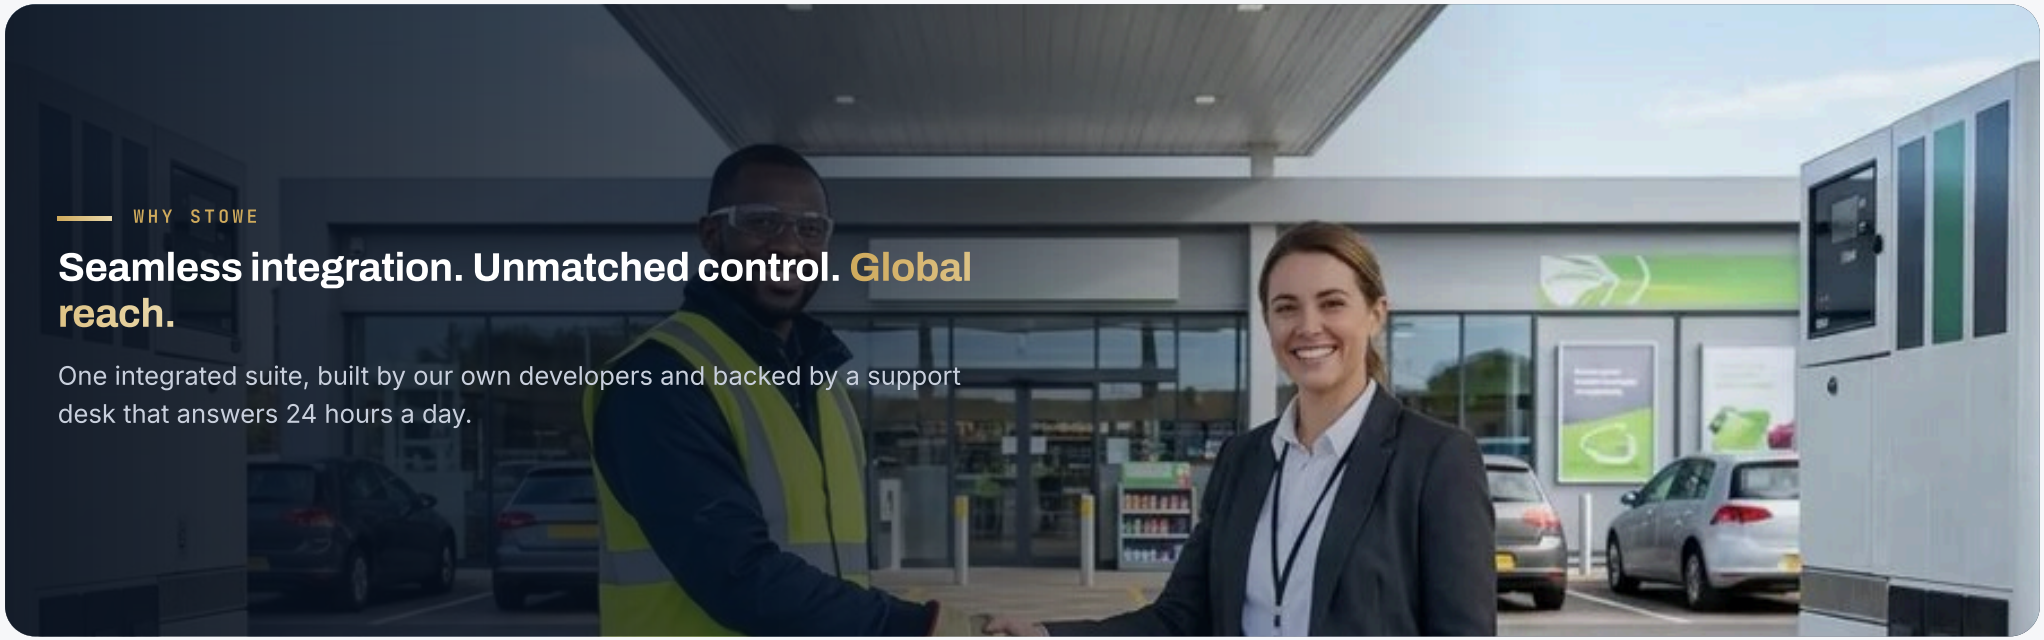
Financial analysis

Debtors Age Analysis, Blacklisted Debtors, Creditor Age Analysis, Payments Made and Payments Received.

AUDIT

Deviation reports

Trace activity across every NetACC menu, including stock changes, fuel receipts and account changes, for full accountability.



WHY STOWE

Seamless integration. Unmatched control. Global reach.

One integrated suite, built by our own developers and backed by a support desk that answers 24 hours a day.
